

Please Read This

These are the file that accompany the Binary Latch Presentation

The '.m' files are the Matlab/Freemat files. Please place them in the same folder. You can download Freemat from <http://freemat.sourceforge.net/>

The '.lgi' files are the Multimedia Logic files that can be opened in Multimedia Logic. The program can be downloaded from <http://www.softronix.com/logic.html> as the Setup Kit.

The Patent

Some matter in this presentation is claimed in U.S. Patent 7,365,576 (the '576 patent), which is a valid patent at this time.

I am not sure that anyone still cares at this time if a patent is infringed, especially at a time when "efficient infringement" is practiced by organizations that should know better.

My intention is not to prevent anyone from learning about this highly unusual and enlightening subject. You have an automatic license provided by this document to run the program on a single computer and to implement or build a single latch as claimed by the '576 patent. You have no permission to sell any claimed device as long as the patent is valid and in force. Contact us at admin@ternarylogic.com if you have any questions related to the patent.

It is your own responsibility to make sure you do not infringe

Enjoy the presentation and its highly unusual results.
